

Increasing AI Autonomy

L1: Function-Level - Auxiliary Tool	L2: Task-Level - Task Execution	L3: Collaborative-Level - Collaborative Autonomy	L4: Guidance-Level - Expert Guidance	L5: Autonomous-Level - Full Autonomy
				
AI is invoked as a tool; human executes and closes the loop.	Human decomposes and assigns research tasks, AI executes the decomposed sub-tasks.	AI executes the primary research task; human collaborates and supervises.	AI provides expert-level services; human participates in key decisions.	AI operates with full autonomy under human authorization, potentially exceeding human capabilities.
				

Decreasing Human Intervention
