

Agent Skills Application Scenarios	    Code Snippets Action Scripts Verbal Rules Workflow Templates Encode reusable task-solving procedures in diverse formats.
Code	 Verified Composable Function Toolbox: Execution trajectories are abstracted into functions stored in an expandable toolbox, and retrieved for future.
Web/GUI	 Transferable Parameterized GUI Scripts: Multi-step GUI interactions are encapsulated as executable scripts, enabling cross-site transfer without redundant exploration.
Chatbots	 Hierarchical Memory & Tool Orchestration: Memory management maintains dialogue coherence, while complex intents are decomposed into sub-tasks routed to tools.
Robotics	 Reward Synthesis & Motor Primitives: Reward functions are generated and refined via evolutionary optimization. High-level commands are grounded into motor primitives.
Finance	 Experience-Distilled Verbal Strategies: Trading experience is distilled into natural language decision rules, iteratively refined through simulated portfolio feedback.
Healthcare	 Simulation-Driven Diagnostic Expertise: Diagnostic expertise emerges from simulated encounters without human annotation, structured as clinical reasoning chains.
Game	 Composable Executable Skill Library: Skills are represented as executable programs in a hierarchical graph, semantically indexed, and retrieved for open-ended composition.
Social Simulation	 Persona-Conditioned Behavioral Routines: Behavioral routines follow a cyclic plan-act-reflect process conditioned on persona and memory stream.
